

# Enterprise iSensor

Protect critical assets with an intelligence-enhanced IPS service

IPS appliances require vigilant administration and management. IPS appliances must be configured and installed. Patches and upgrades must be deployed. Alerts must be monitored, reviewed, analyzed and prioritized 24x7. Device health must be monitored to ensure it is operating as expected.

## IPS Network Intrusion Protection from Harmful Traffic that Evades your Firewall

An intrusion prevention system (IPS) is a critical layer of defense that requires vigilant monitoring to protect your network from harmful traffic that has passed through or bypassed your firewall. IPS appliances must be managed and maintained. Security alerts must be monitored and analyzed 24x7 to identify and prevent intrusions before damage occurs. Rules need to be continuously assessed and fine-tuned to thwart known and emerging threats without disrupting normal business traffic.

## A Dell SecureWorks Solution

Dell SecureWorks Enterprise iSensor IPS service, available as a fully managed subscription bundle,

helps you eliminate malicious inbound and outbound traffic around the clock, without the burden of device or signature management, and without increasing in-house headcount. This managed intrusion prevention (IPS) service lets you comply with regulations to protect against threats to sensitive data and provides comprehensive reporting to demonstrate the effectiveness of your security controls.

iSensor performs in-line deep packet inspection of inbound and outbound network traffic using multiple integrated defense technologies to identify and block real security events that require attention. iSensor utilizes thousands of unique countermeasures developed by our Counter Threat Unit<sup>SM</sup> research team.

## Expert Management and Support

- 24x7 monitoring and analysis of security events
- Upgrades, patches, performance and availability
- Health monitoring including status and performance trends
- Thousands of unique iSensor countermeasures
- Intelligence-enhanced threat protection
- Configuration and implementation

# 24x7

## Service Features

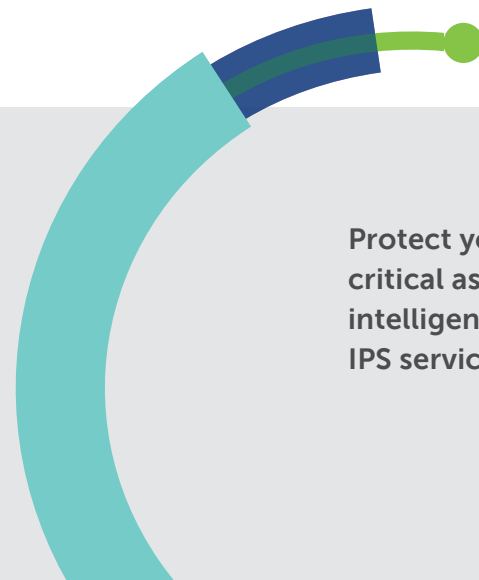

- Intrusion prevention appliance
- Thousands of unique countermeasures developed by the Dell SecureWorks Counter Threat Unit (CTU) research team
- One annual subscription that includes hardware, support, managed and monitored service, and CTU countermeasures
- Interchangeable interfaces allow for easy enterprise growth & expansion without changing chassis
- Unmetered support from Dell SecureWorks' certified security experts.
- Policy and rule-set management
- Device upgrades and patch management
- Appliance backup and recovery service
- Extensive security and compliance reporting capabilities.
- Hardware life cycle management at no additional charge

## Service Benefits

- Reduce management and monitoring costs
- Protect systems and data 24x7 without increasing in-house headcount
- Defend your network with real-time threat intelligence
- Guard against the new and emerging threats
- Filter out "noise" and manage real attacks that require attention
- Satisfy compliance regulations

## Why Dell SecureWorks?

- Dell SecureWorks is recognized as a global leader among Managed Security Service Providers (MSSP) by Gartner
- Our global visibility into the threat and vulnerability landscape, together with our deep security expertise, provides unmatched, real-time intelligence-driven defense and protection to our customers, around the clock
- 85+ billion events monitored each day
- 4000+ clients world-wide

**Protect your  
critical assets with  
intelligence-enhanced  
IPS services**
