Secureworks®

Global Threat Intelligence

Cutting-edge Technology and The Secureworks Counter Threat Unit™ (CTU™) Research Team Enhances Your Security Defenses with Visibility Into the Threat Landscape

Building Stronger Defenses Requires Actionable Information

True threat intelligence is not just a collection of threat indicators or data points. For threat intelligence to be useful, security teams must be able to combine data points with contextual information that enables them to determine what threats are relevant to their organization and how best to respond.

Information that does not empower an organization to make smart, effective decisions about cybersecurity cannot provide much of a service — no matter how it is packaged.

Secureworks harnesses the power of the global network of clients to enhance visibility into the threat landscape and provide additional context to threats to IT environments regardless of country or industry — making Secureworks Threat Intelligence Services truly intelligent, enabling clients to see more, know more, and do more to respond to threats quickly, effectively, and confidently.

Global Threat Intelligence

Global Threat Intelligence is generalized or non-targeted threat intelligence developed by Secureworks expert security researchers and based on data of threats collected and analyzed by the CTU across the client base of more than 4,000 managed security clients.

Using advanced tools and techniques, Secureworks researchers thoroughly dissect malware to determine its functionality, purpose, composition and source. Researchers share insight into the malware's potential impact to your networks, systems, and information assets, and suggest recommendations for the malware's removal.

Additional Service Offering: Threat Intelligence Support

Threat Intelligence Support provides you with direct access to CTU researchers for information regarding threats, vulnerabilities and advisories. When a request is submitted, a CTU researcher will respond within one business day. Direct access to this team enhances your internal security capabilities by providing expert guidance and consultation as needed.

Client Benefits

- Globalized view of emerging threats
- Understanding of evolving Tactics, Techniques and Procedures (TTP) of threat actors
- Information about known threat infrastructure
- Newly identified vulnerabilities
- Clear actionable guidance to enhance your security profile
- Unmatched malware analysis and reverse engineering expertise

Experience Does Not Come in a Box

The Secureworks Counter Threat Unit (CTU) consists of more than 80+ cybersecurity experts, each with an average of 13 years of experience. The CTU team has a diverse background spanning private security, military and intelligence communities, and specializes in tracking, investigating, and detecting sophisticated threat actors, be they nation-state actors or cybercrime groups. In addition, CTU researchers also specialize in incident response, malware analysis and digital forensics, making their expertise regularly sought after by government agencies, enterprises and the media.

The Secureworks Counter Threat Platform™ (CTP) uses machine learning and analytical capabilities and seamlessly blends threat intelligence into the delivery of our solutions. Each day, our CTP processes billions of events, generating more data and greater visibility.

Secureworks Makes Threat Intelligence Work for You

Secureworks pulls and contextualizes information from the cyber underground, analysis of attackers' tactics, tools and procedures, and the threat activity affecting our clients worldwide. This enables Secureworks to centralize, query, analyze, and correlate billions of threat indicators and event data.

This mix of artificial and human intelligence allows us to understand not only who is behind an attack and how it occurred, but also what happened in the client's environment and what can be done to contain and eradicate the threat. By leveraging the CTP, CTU, and global visibility, Secureworks is able to bolster clients' security defenses continuously and make security smarter.

Solution Features

- **Vulnerability Data Service:** A detailed analysis of current vulnerabilities

- **Threat Analysis Service:** A detailed decomposition of malware or threats published by The CTU Research Team twice monthly

- **Advisory Data Service:** Advisory reports contain strategic security information pertinent to the threat landscape and are published as threats become known

- **Monthly Security Intelligence Webinar:** The CTU Research Team hosts a monthly webinar security briefing describing current security threats and advisories

- **Malware Code Analysis:** If unknown malicious code affects your organization, we reverse engineer the code to understand its behavior and impact

About Secureworks

Secureworks® (NASDAQ: SCWX) is a leading global cybersecurity company that protects organizations in the digitally connected world. We combine visibility from thousands of clients, aggregate and analyze data from any source, anywhere, to prevent security breaches, detect malicious activity in real time, respond rapidly, and predict emerging threats. We offer our clients a cyber-defense that is Collectively Smarter. Exponentially Safer.™
