Years of threat intelligence data

190B

Security events processed daily

2B+

Threat indicators

300+

Expert security analysts

700+

IR engagements last year

SecureWorks®

The Challenge

Cyber threats have emerged as one of the most significant business risks facing enterprise organizations today. Despite multiple layers of defense implemented over time, organizations are still prone to attack from constantly evolving and sophisticated methods of intrusion and infiltration.

SecureWorks helps meet the challenges that organizations face today by delivering “future-proof” protections. This means that your organization can approach IT security as an embedded function of your business regardless of how security challenges evolve. Once this function is in place your IT infrastructure can adapt and thereby focus on IT security as a business enabler, as opposed to a crisis management function.

The Solution

SecureWorks does this through the Counter Threat Platform, our SaaS-based early-warning system that delivers insights and deploys countermeasures, derived from analytics and applied intelligence. Working as a holistic platform, the CTP delivers:

- Rapid insights and accuracy
- Business-driven context and intelligence
- Full visibility
- Accelerated response and orchestration
- Skills and expertise

The Counter Threat Platform delivers the qualitative and quantitative intelligence that helps you make educated, informed decisions in real time.

Adapting to this strategy enables you to prepare for these challenges:

- » Threat-driven vs. Business-driven approach
- » Increased threats to the business
- » Skills shortage
- » Uneven security posture based on resources
- » Reporting to the C-suite and BoD
- » Inability to support innovation and change
- » Challenged to meet or maintain compliance

Counter Threat Platform — At Work

SecureWorks helps meet the challenges that organizations face today by delivering “future-proof” protections. Regardless of how the threat landscape evolves, with the power of the SecureWorks CTP behind your organization, you will be able to:

- Realize an outcome-based experience
- Optimize existing security investments (tools, resources)
- Predict business risk and make faster decisions
- Reallocate cost savings and maximize resources
- Close the skills gap for hard to find expertise
- Make compliance less of a burden

What truly sets the SecureWorks Counter Threat Platform apart is how each functional component of the CTP works seamlessly, adding intelligence to automation, simplicity into orchestration, and confidence into recommendation.

The SecureWorks Counter Threat Platform consists of three functional components:

Analytics

Our Analytics component delivers context through advanced correlation, insights through constantly adapting machine learning, and countermeasures through sophisticated expert systems.

Intelligence

The Intelligence component is where we bring in the power of our expertise and world renowned Counter Threat Unit™ researchers. They are constantly identifying new threat tactics, techniques and procedures, developing countermeasures for emerging threats, and providing security orchestration and resolution for our clients.

Operations

The Operations component is where we deliver the power of the CTP to our clients, through unified visibility and reporting, one-click command and control for continuous response, and instant access to the critical skills and expertise that our clients rely on.

SecureWorks Unifies Enterprise Security

SecureWorks unifies enterprise security for our clients by spanning the security ecosystem of products and vendors, thereby optimizing our clients investments, and allowing them to utilize IT as a business driver. Our vendor-neutral approach enables clients to enhance their existing IT security infrastructure and “best of breed” technologies with

our solutions and capabilities. With this unique approach, clients do not have to throw out their existing investments to leverage the power of our Counter Threat Platform.

SecureWorks Security Framework

SecureWorks offers robust end-to-end capabilities regardless of where our clients may be in the security maturation process. Additionally, we offer a broad range of consulting service offerings to help clients construct, optimize, or build out their security program as well as turn-key managed and SaaS based solutions for network, endpoint, data, app, cloud/IoT, and security operations.

Every one of our industry leading services are built on the foundation of the SecureWorks CTP. So with every service we deliver, our clients receive the power of the CTP: our Analytics, Intelligence, and Operations, delivering security when, where, and how they need it for a fraction of the cost of traditional approaches.

Who Is SecureWorks?

SecureWorks has been delivering intelligence-driven information security solutions to our clients for more than 17 years. During that time, we have built an elite security organization that includes more than 2,000 employees in over 59 countries. Each day, we process up to 190 billion network events daily, and have identified over 2 billion threat indicators. We have more than 300 expert security consultants that have performed over 700 Incident Response engagements last year alone and typically, we perform over 1,500 consulting engagements annually.

What this means is that when we add our unprecedented breadth of visibility to the power of the Counter Threat Platform, we are able to apply that intelligence across all of our security solutions and provide our clients with

unprecedented insight, analytics and intelligence, as well as help them secure their network with rapid countermeasures and unified visibility. When we add all this together, it is clear why we are the recognized security intelligence solutions leader.

We also know that with leadership comes responsibility. For that reason we work and partner with many different agencies to provide insight to the global threat landscape, help fight cyber terrorism and share methods and best practices, both here and abroad.
